

The S. Daniel Abraham Geriatric Center

“Beit Avraham”

Administrative Director:□

Mr. Mordechai Kirshenbaum

□ □

General□

The geriatrics department located adjacent to Laniado Hospital is called “Beit Avraham,” in honor of S. Daniel Abraham.

Beit Avraham was founded in 1983 in order to provide a solution for those in Netanya and the surrounding area in need of nursing care

The professional staff offers high-level services combined with knowledge, skills, dedication, and the commitment to honor and preserve the patients' rights. The staff is especially skilled in listening to the patients, understanding their feelings, and providing for their needs. Beit Avraham offers a wide range of activities (see list below). In 2003, Beit Avraham moved into a new, modern building equipped with the latest technology. This was made possible thanks to donations, including funds from the Conference on Jewish Claims Against Germany.

Departments

Beit Avraham has three departments:

In Nursing Care Departments I and II, the patients are referred and subsidized either privately or by the Israel Ministry of Health. Nursing Care Department III is for the most complex situations demanding an especially high level of nursing care, and the patients are referred by the various health funds. All of the departments have spacious rooms designed for one or two patients. Each room has a private bathroom and shower. Each department has a large hall for meals and activities, a large balcony, and sitting areas.

The building has a sample apartment for rehearsing the return home, for patients who are able to return to their own homes after their stay.

Department Activities

- Physical therapy on a daily plan with a wide range of equipment
- Occupational therapy
- Employment consultation
- Therapeutic swimming pool
- Gardening therapy, in cooperation with the Council for a Beautiful Israel

Movement therapy for groups of families
Participation in the program is open to all patients, family members, and caregivers. The program is designed to provide a safe and supportive environment for patients and their families to learn and practice new skills and techniques. The program is led by a team of professionals, including geriatricians, occupational therapists, and social workers. The program is held in a large, well-lit room with comfortable seating and a variety of activities. The program is free of charge and is available to all patients and their families. For more information, please contact the Geriatric Department at 052-9380000.
